

Tower Management Services

Transmission tower asset supervision and management

CASE STUDY

Design, planning, build supervision and asset management of network dish tower - Slough

- Sourcing and procurement of initial tower.
- Development of various initial design options.
- Production of full planning and construction drawings during development process.
- Production of photomontages from multiple locations for required visual impact inspection.

- Management of existing transmission systems and proposed new dish orders and assignment.
- 3D modelling of tower and existing transmission equipment.
- On-site install supervision for dish and associated equipment, with tower installation support services.
